WORK EXPERIENCE

Stryker (formerly Vocera Communications), San Diego, CA
Senior Technical Support Engineer February 2022 - Present

- Engineering & Automation
  - Engineered a full-stack automated SSL certificate management platform (Python/VueJS), eliminating manual renewal process and reducing human errors.
  - Architected custom Zabbix and Kibana monitoring scripts, providing real-time visibility into system health and reducing Mean Time to Detection (MTTD) for critical application failures.
  - Developed automated SQL and Regex generation scripts for FreeSWITCH and API integrations, accelerating troubleshooting workflows for complex communication routing.
- Technical Leadership & System Reliability
  - Drive resolution for high-priority escalation involving cloud-native architectures, leveraging expertise in Kafka, Zookeeper, Ansible, and Docker to maintain uptime for clinical communication tools.
  - Direct technical interviews for Engineering and SRE roles, standardizing the evaluation process to ensure high-quality hires for the global support organization.
  - Spearheaded internal technical enablement by designing and teaching certification track courses (RHCSA, AWS, RHCE), increasing team technical proficiency.
- Integration & Data Analysis
  - Manage complex API integrations between Vocera Edge and third-party healthcare systems, ensuring seamless data flow and clinical interoperability.
  - Perform deep-dive root cause analysis (RCA) using MySQL and MSSQL to identify systemic application bugs and influence the product development roadmap.

SkyRiver IT, San Diego, CA
Remote Support Technician September 2021 - February 2022

- Worked using Datto RMM and PSA to record incidents related to software installations, network problems, or other computer-related issues.
- Analyzed and troubleshoot network issues and providing recommendations using ping, traceroute, nslookup, ARP, and Wireshark.
- Researched and updated knowledge base repositories like ITGlue for technical solutions and configurations.

- Analyzed a malware received through email, which led to discovering plaintext passwords from on-going phishing campaigns, and informing over 20 businesses of compromised accounts.
- Monitored server load, performance, and user administration on RHEL & CentOS systems.

Global Equity Finance, San Diego, CA
IT HelpDesk Technician January 2020 - September 2021

- Created baked windows images for reduced turnaround on computer setups.
- Resolved end user tickets regarding software, hardware, and/or accounts in a 250+ user environment.
- Designed and deployed 7-server linux environment for delivering graphic news content across two floors, automated content change using custom Bash scripts and systemd services, and configuration management using Ansible.
- Created automation tools and performing wide-scale software deployments using Python scripts, reduce workstation deployment times by 85%.
- Handled identity and access management; provisioning, supporting, and disabling user accounts and profiles.

PROJECTS

SSL2OOL (October 2023) - Designed and developed a web-based tool to replace command-line SSL utilities like OpenSSL, streamlining certificate management for developers and IT teams. Built with Vue.js (frontend), Python & FastAPI (backend), the application provides a user-friendly interface for generating Certificate Signing Requests (CSRs), Java keystores, and validating SSL certificates.

- Improved efficiency by eliminating manual command-line operations, reducing certificate setup time.
- Enhanced security by enforcing best practices for SSL certificate generation and validation.
- Simplified workflows for teams managing SSL/TLS infrastructure.

MULTI-SSH (January 2024) - Designed and developed a Java and Python based-tool to streamline remote server management by enabling bulk execution of shell commands across multiple hosts via SSH. The application improves efficiency for system administrators, DevOps teams, and network engineers by providing centralized execution, logging, and auditing.

- Optimized multi-server management by allowing simultaneous execution of custom or predefined shell commands.
- Enhanced troubleshooting and compliance with built-in execution history tracking and result logging.
- Secure and scalable with SSH-based authentication and support for large infrastructure deployments.

EDUCATION

High School (2015) - Dee Unique International Schools, Lagos, Nigeria
High School (2018) - Crawford High School, San Diego, CA
BSc in Computer Science (2022 - Present) - San Diego Mesa College

INDUSTRY CERTIFICATIONS & TRAINING

CompTIA A+, Network+, Security+, Linux+, PenTest+
RedHat Certified Systems Administrator (October 2021)
AWS Certified Solutions Architect Associate (October 2021)
Microsoft Azure Administrator Associate (November 2021)
Cisco Certified Network Associate (December 2021)
RedHat Certified Engineer: Ansible Automation (March 2022)
AWS Certified Developer Associate (April 2022)
HashiCorp Terraform Associate (April 2022)
AWS Certified SysOps Administrator Associate (May 2022)
AWS Certified DevOps Engineer Professional (June 2022)
Python Certified Entry-Level Programmer (January 2023)
Hashicorp Vault Associate (February 2023)
Python Certified Associate in Python (April 2023)
Oracle Java Certified Foundations Associate (April 2023)
Red Hat Certified Specialist in Containers (July 2023)
Red Hat Certified Specialist in Services Management and Automation (August 2023)
